LUXURIOUS

At Sunnywei we have a **vast collection of natural stone products** available from our exclusive quarry. We take the raw stone materials and through an extensive manufacturing procedure and with the use of specialized equipment we fabricate light weight stone veneers, panels and mosaics. Our products will create a natural look of elegance for any variety of landscape and interior design projects.

**With more than 20 years experience** in the natural stone industry and with 12 years of business operation in North America we can offer the best possible services available. Our professional staff and operation system are a guarantee to the quality of both our products and customer service here at Sunnywei.

**LuxeStone** is the brand name of our selectively designed stone products in North America. We mainly focus on wholesale business and we serve our customers with the guarantee of timely information and accurate order processing, as well as provide design assistance, installation and installation references.

Mats (Square)	56~57
Stone Mosaic	58
Display Racks	59
More Applications	60~61
Installation Guide	62~63

## LEED Points

The **Leadership in Energy and Environmental Design (LEED)** Green Building Rating System is a third-party certification program for the design, construction and operation of environmentally efficient buildings. A project, whether it's new, majorly renovated or commercial interior, can obtain LEED certification by achieving points in five key areas: sustainable site development, water efficiency, energy efficiency, materials and resources, indoor environmental quality. Sunnywei strives to provide products that minimize their impact on the environment.

LEED Credit	Why Choose Sunnywei	LEED Points for your project
MR credit <b>4.1 and 4.2</b> recycled content	The LuxeStone product contains <b>80% ~ 90%</b> recycled content	Contributes <b>1 LEED Point</b>
MR credit 4.1- one point is awarded for using materials with recycled content such that the sum of post-consumer recycled content plus one-half of the pre-consumer content constitutes at least <b>10%</b> , based on cost, of the total value of the materials in the project.	The LuxeStone Veneers contain <b>80% ~ 90%</b> of recycled content as they are made from left over or waste from quarries and stone factories. When combined with the rest of your material selections, Sunnywei products will help you stay above the <b>10%</b> average for recycled content.	

In order to fully satisfy our whole sale dealers' demand for our product, in 2011, we started to **stock some of the most popular items** of our large selection of designed stone. Our showrooms and warehouses are located in Concord and Richmond Hill, Ontario.

Our stocked stone products are commonly used in North America, providing our services to **builders, architects** and **designers**. We strive to keep current with the latest design trends while also maintaining the traditional and timeless styles of our LuxeStone products. LuxeStone products are **extremely durable, resistant to high and low temperatures** and has **minimal water absorption**.

**To meet the business demands all over the world**, we greatly encourage the dealership network in different areas. We are able to supply any quantity of our products, be it in boxes, crates and/ or container form. All authorized dealers can benefit from our free samples and "discount of dealership" prices. In addition, customers will receive full capacity delivery as well as **quality customer assistance and technical support services**.

PLEASE NOTE:

The colors of the products shown in this catalogue are as accurate as the photographers and printing process will allow. We strongly recommend that you make your final color selection based on a current product sample rather than on the photographs shown here.

APPLICATIONS OF LUXESTONE

- Home Facade
- Archways & Columns
- Interior and Exterior Walls
- Kitchen / Barbecue Range
- Patios, Decks, Porches and Balconies
- Pool / Spa Areas
- Water Features
- Planter Boxes and Retaining Walls
- Fireplaces and Chimneys

- Rubber Mallet
- Tuck Pointer
- Whisk Broom
- Large Sponge
- Soft Bristle Brush
- Stiff Wire Brush
- Scraper
- Level
- Bucket
- Safety Glasses
- Dust Mask
- Gloves

## PREPARATION

### 1. Follow the Building Codes

Always check with your federal or local government for the applicable building codes. Make sure these codes are properly followed in the construction. Apply water proofing barriers, mesh, etc. if required by the codes.

### 2. Check the wall and substrate

Stone panels are heavy; make sure the wall or substrate you work from are strong enough to support the weight.

### 3. Cleaning

Clean the wall surface you are going to apply the stones to. Wipe or if possible, flush the stone to make sure the back is free of dust, dirt, sand etc. The stone panels may be applied to any masonry surface, concrete block, concrete, cement, and brick. Make sure the wall surface is in its original, untreated condition. If there are paintings on the wall, sandblast or strip it to recover it to a smooth condition.

### 4. Mesh and Scratch Coat

Apply lath or wire mesh if it is needed/required. Apply a ½” thick scratch coat over the metal lath and allow it to dry for at least 24 hours.

Ebony - Square Mat

### 5. Calculate the quantity

The standard size of each veneer panel is 6”x24”, which is one square foot. Estimate the quantity of the panels you will use based on the size of the area to be covered. An additional 5% to 10% of stone panels should be prepared as a buffer.

### 6. Corner Panels

Cut the double-corner panel in half to get two corners, which can then be used to form a complete corner. Varying the length of each cut will help to form a brick pattern for the whole panel area of application.

## INSTALLATION

### 1. Dampen the working surface

Dampen the entire working area of the wall and the back of the panel with sponge or water sprayer. It will keep the moisture of the mortar from being excessively absorbed by the wall or the panel. Doing so is especially important in hot/dry weather.

### 2. Apply Mortar

Use a trowel to apply a ½” thick mortar to the backup wall or the scratch coat. It is suggested to apply the mortar to a small area each time in case the mortar sets before you place the stones.

Ebony - Square Mat

### 3. Set Stones to the Wall

Apply another ½” thick mortar to the back of the stones. Press the stones firmly against the wall. Use a rubber mallet to help if necessary. If corner pieces are needed, install them first. Start from fixing bottom panels and work up so that the stone panels are level. Clean the mortar droppings and those forced out beyond the panel surfaces before they harden.

### 4. Stone Placement

Place the stone panel in a brick pattern to eliminate the stiff look of vertical joints lining up the wall. One trick of avoiding the rigid appearance is to cut the corner panels into different lengths.

## COMPLETION

### 1. Cleaning

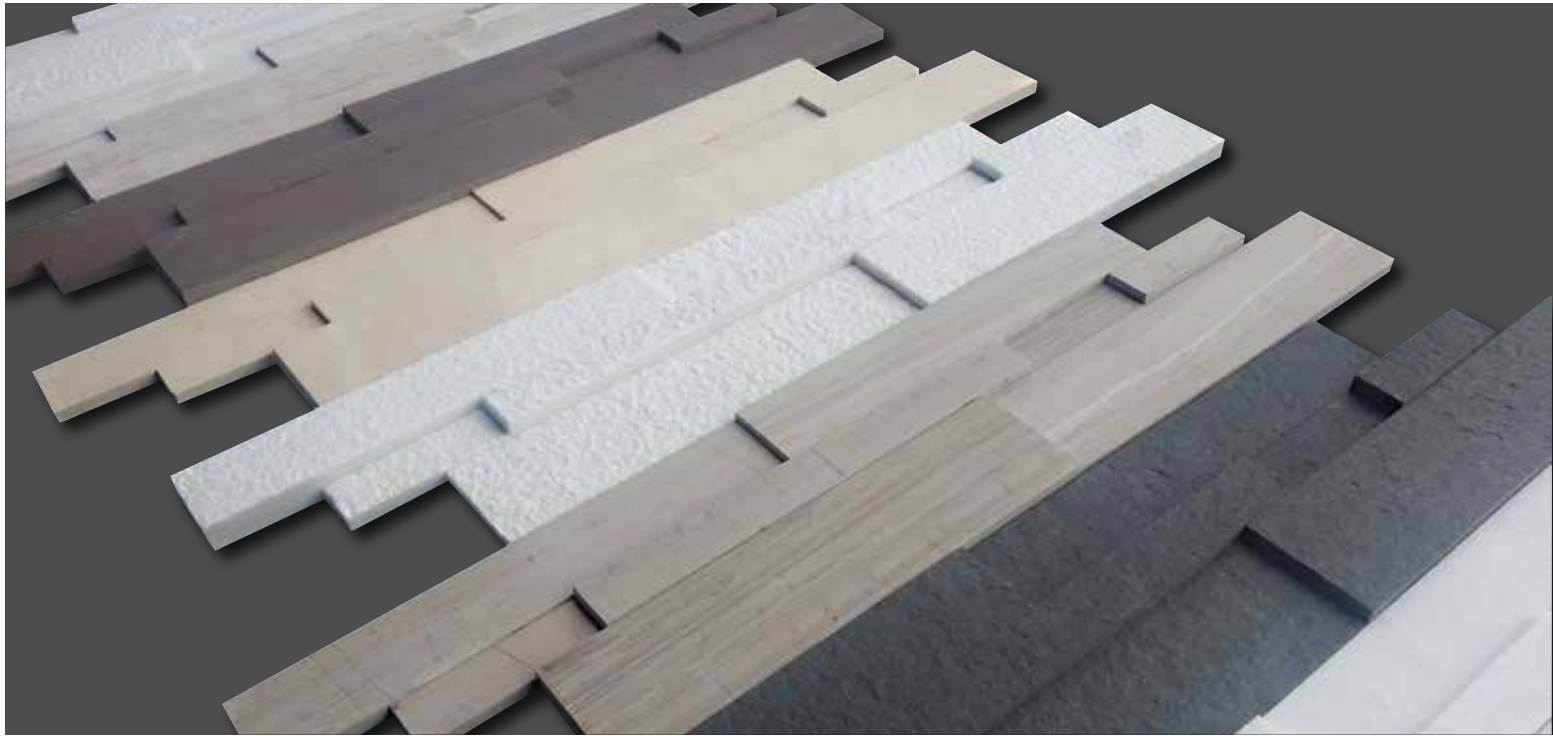

Clean the stone surface with mild detergent after 36 hours with a soft bristle brush to remove any smear left.

### 2. Sealing

It is not required but strongly suggested to seal the stone surface. Sealing the stone panels will help to repel stains and dirt, enhancing the color of the stone as well as making the surfaces easier to clean. It is important to note that it is possible that the sealer may alter the stones’ natural color slightly. It is also recommended to periodically reseat the stones to ensure that they are protected.
